

Web-based Capital Project Management & Collaboration Solution Overview

Cordjia's Web-based Capital Project Management and Collaboration Solution is an integrated, client-centric capital project management solution that incorporates 13-years of industry specific research and innovation conducted by e-Builder into a scalable, flexible, and fast-to-deploy suite. A web-based platform is used to manage cost, schedule, and scope and provides a repeatable, predictable, and measurable way to improve business processes during planning, design, and construction. The result is less churn, increased productivity, accountability, and program control, along with increased efficiency, lower costs, and faster speed to market for quicker revenue generation.

Integrated Cost, Schedule, Process, and Document Management solutions allow you to access and analyze key project information fast, centrally manage and track communications and files/documentation. The easy-to-configure reports help you quickly sort through project data in a way that is meaningful to the different stakeholders in your team.

Primary Benefits

Cost Management

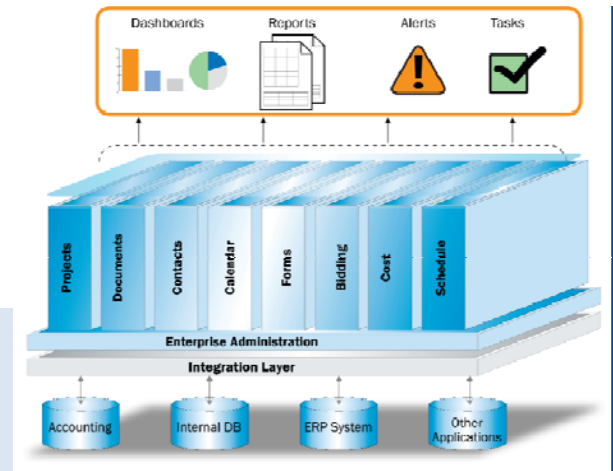

The Cost Management Solution provides financial control and audit features in a secure environment that help you improve how you manage your budgets across one project or your entire capital program. Use it to create and track budgets either during planning or construction, and conduct budget review and approvals online. The system is SAS 70 Type II certified, which also helps organizations comply with federal and state regulations. Quickly identify past and current costs, commitments, and changes as a project progresses. Built-in forecasting features enable you to accurately predict the cost-to-complete and cash flow needs. The Cost Management Solution will also provide you with cost summaries across one or more projects with a couple of mouse clicks, and let you drill down into detailed information, including links to related documents (contracts, invoices, change orders). Used in the project planning phase, it acts as a budget creation and project prioritization tool, which allows you to leverage existing data from completed projects for accurate draft budgets.

Schedule Management

The collaborative Schedule Management Solution integrates the power of Critical Path Method scheduling with the collaborative capabilities made possible with the Internet. Efficiently manage schedule and scope changes from a central location that is accessible by the different project resources online. Integration with common desktop scheduling systems, such as Microsoft Project, let you import existing project files. After creation of a schedule you can track performance against a baseline, and the system automatically updates the critical path when your schedule changes and tasks are completed. Integrated Gantt reports give you a graphical view of your project's activities at a glance, including project milestones that you define to enable benchmarking and tracking of key performance indicators.

Document Management

The Document Management Solution serves as the central repository of all your project files, including documents, drawings, photographs, CAD files, and more. Project teams

benefit from improved communications and data exchange as well as improved collaboration. This Solution automatically tracks and records all of the information exchange (upload, download, email) occurring within the system. Plus the Document Management Solution's built-in version control automatically renames documents and files upon transfer, and stores a copy of previous versions. You can view over 250 file types using the integrated viewer, which lets you preview and markup a PDF version without requiring or altering the source file and software. Leverage powerful integration capabilities with CAD software to facilitate the viewing, transfer and searching of drawings. E-mail and fax (in and out) capabilities provide users with additional collaboration and communications options that increase use and adoption.

Business Process

Your stakeholders will appreciate the ease with which they can create and configure workflow forms that map to your internal processes. These electronic forms can be configured for the exchange and routing of budget and schedules for approval, issue management, change order requests and approvals, and more. Forms can have documents, files, and other forms attached for added adaptability to your processes.

Reporting

The integrated nature of the Cost, Schedule, Documents, and Business Process Solutions provides a flexible and efficient way to define and generate a broad set of reports with a few mouse clicks. Reports can be configured to include a broad range of metrics and can be project-specific or span across multiple projects. Each report contains links to additional details so you can quickly drill down into the data that makes up the reports.

You can define standard reports for use across your organization using supplied templates based on industry best practices, or configure new ones based on your organization's reporting needs. Individual stakeholders can also create and save their own reports for endless reporting possibilities. Reports can be emailed to individuals and groups at predefined intervals (daily, weekly, monthly).

For a visual representation of your project and program status, a fully configurable executive dashboard can be provided for each user. These dashboards display data using charts, graphs, and gauges that you configure, and provide excellent visibility into the status of your projects and program key performance indicators.
